

Summary of Fishing Efficiency Documents – Hazard #3

These documents deal with the following:

- A research update on estimating increases in fishing efficiency/power using a gear and equipment surveys and a stock depletion technique (1 doc).
- A power point presentation of results of a phone survey of rock lobster fishers conducted on behalf of the Rock Lobster Industry Advisory Committee (RLIAC) to obtain their estimates on the changes in fishing efficiency that have occurred in the fishery (1 doc).
- The terms of reference of a review of the rock lobster fishery stock assessment by Professor Norman Hall as part of the MSC requirement to meet a corrective action for re-certification of the fishery. Professor Hall is currently (Dec 06) in the process of finalising a draft of his report to the Western Australian Fishing Industry Council.
